a)
$$T_f = \frac{L}{c} = \frac{256 \times 8}{2048} \times 10^{-3} = 1 \text{ ms}$$
 $a = \frac{T_b}{T_f} = 1, 5$

Com W=7 0 emiller pod envir 7 tames até receler confirmecs. Depois dissa puele fech.

Considerando IP=1 ms e IB=1,5 ms Verifica-le pe podem per produkados 3 Confr macres. (et) Consecutivas. d) N=8, W=7

Problem 5

$$C = 236 \text{ wht/s}, \quad \beta = 0,75, \quad N/N/1, \quad Z = 4000 \text{ ht}$$

A)

 $A = \frac{C}{L} = \frac{256 \times 10^3}{4 \times 10^3} = 64 \text{ probs}$
 $A = \frac{A}{I} \rightarrow A = \beta \mu = 0,75 \times 64 = 48 \text{ probs}$
 $A = \frac{1}{I-\rho} = 3 \rightarrow I = \frac{A}{A} = \frac{3}{48} = 62,5 \text{ ms}$
 $A = \frac{1}{I-\rho} = 3 \rightarrow I = \frac{A}{A} = \frac{3}{48} = 62,5 \text{ ms}$
 $A = \frac{1}{I-\rho} = \frac{N}{I} = \frac{NL}{I-\rho} = \frac{I}{(I-\rho)NC} = \frac{I}{(I-\rho)C} = \frac{I}{I-\rho} = \frac{I}{I-\rho}$

So $L' = 2L \rightarrow I' = KL' = 2KL = 2I' = 12J \text{ ms}$
 $A = \frac{L'}{I} = \frac{L}{I} \rightarrow I'' = KL'' = \frac{L}{I-\rho} = \frac{I}{I-\rho} = \frac{I}{I-\rho}$
